trace file

□ example_inst.trace & trace.cpp & core.cpp

- simpleO3 CPU model 기준

- Ramulator는 “Memory” Simulator

- Memory 명령어만 취급하기에, 3가지로만 Instruction을 분리한다.

- 1. Not Memory Operation

- 2. Load

- 3. Store

- 따라서, simpleO3 기반 trace 파일:

- 1st column은 Not Memory Operation Cycle 수 (or ticks 수)

- 2nd column은 load operation address

- 3rd column은 store operation address

1	3	20734016
2	1	20846400
3	6	20734208
4	1	20846400

6	0	20734144
7	2	20918976
8	1	20846400
9		20734016

- 각 line은 load(& store) 동작을 나타낸다.
- 1st line : 3cycle 동안 stall → load
- 5th line : 8cycle 동안 stall → load → store

- 기본 yaml file setting을 이용.
=> trace file의 Inst 실행결과가 분석됨
- 1. Frontend:
CPU ↔ Memory<Cache> 접근 분석
- 2. MemorySystem<DRAM> 관점 분석
 - Request 수
 - Cycle 수
 - Latency
 - Queue 길이
 - Row Hit / Miss

trace file result analysis

□ ./ramulator2 -f ./example_config.yaml

- 분석 시 사용한 trace file은 오른쪽의 example_inst이다.
- 예상 simulation 결과는 다음과 같아야 한다 → 이를 실제 Results와 비교한다.
- 8번의 load (address: 0x20846400가 3번 나온다)
- 2번의 write (1st Inst의 address, 5th Inst의 address에 Write [이미 load된 address 접근 → cache hit])
 - DRAM 관점
 - 이를 통해서 6번의 DRAM Read Access를 요구하는 것을 예측 가능
 - 나머지 중복 load들은 cache line에 hit되어 DRAM Access X
 - Write의 경우 이미 Load된 address에 write하므로 cache이용 : 0번의 DRAM Write Access
 - SRAM(cache) 관점
 - 적은 memory 주소만 반복 접근 하므로 cache eviction X (이전에 load된 addr들은 다 hit 됨)
 - Initial Read Misses: 6번 / Initial Write Misses: 0번

짧은 trace지만 반복 실행 되기에 많은 access 발생

1. Frontend

- Last Level Cache(LLC) 분석
 - Core 0의 Memory(Cache 포함) 접근 Cycles
 - LLC의 Read Request Cache Miss 수
 - LLC의 Read Access 수
 - Miss Status Handling Register(MSHR) unavailable cnt
→ MSHR가 가득 차서 Request 거부된 횟수
 - LLC의 Write Request Cache Miss 수
 - LLC의 Write Access 수
 - LLC의 Eviction 수
→ Cache Line 교체된 수 (DRAM Write 유발)

이전의 예상치와 다르게 LLC의 miss수가 훨씬 많음

- dependency check, reorder buffer 등 때문일 수 있음
- LLC operation 코드 분석이 필요 (01_07에 진행 예정)

- write requests 수 → 현재 0 (cache eviction 없었기에)
- read requests 수 → 현재 6 (initial cache line load)
- Memory system cycles
→ Memory CLK과 Proc CLK이 다르기에 (= 3:8)

DRAM CLK : Processor CLK = 3:8
